

## Migrations vers Symfony4

[Migration SF4 - Points d'attention](#)

[Intégration à Jenkins](#)

[Migration SF5 - Points d'attention](#)

[Migrations Tests automatisés](#)

- Obsolescences à corriger des applications SF2.8
- Migration SF2 => SF3
- Obsolescences à corriger des applications SF3.4
- Migration SF3 => SF4
- Configuration database postgresql

## Installation/configuration de postgresql + création d'une base de donnée

- Configuration de postgresql en local :  
ajouter dans le path : C:\Program Files\PostgreSQL\12\bin
- Création d'une base de donnée mabase :  
executer la commande :  
psql -h localhost -d postgres -U postgres (mot de passe = postgres)  
puis  
create database mabase; // autre possibilité pour créer la base de donnée : aller sur le projet symfony et exécuter bin/console d:d:c
- exécuter la commande  
export PGCLIENTENCODING=UTF8
- Import d'un script mon\_dump\_postgres.sql dans la base de donnée mabase :  
psql -h localhost -d mabase -U postgres -p 5432 -b -q -f mon\_dump\_postgres.sql (mot de passe = postgres)

## Migrations de Oracle vers Postgresql

- Pré-requis : activer l'extension pdo\_pgsql dans php.ini
- Cloud migration tools : [https://gitlab-dogen.group.echonet/gf/itg\\_bp2i/bp2i\\_si/devopen/cloud\\_migration\\_tools/-/tree/develop](https://gitlab-dogen.group.echonet/gf/itg_bp2i/bp2i_si/devopen/cloud_migration_tools/-/tree/develop)
- Créer les répertoires "../data/oracle" et "../data/postgres" (par rapport au répertoire de "cloud\_migration\_tools")
- Déposer le dump oracle dans le répertoire "../data/oracle/dump\_mon\_projet.sql"
- Commande d'import (pour "../data/oracle/dump\_mon\_projet.sql") : bin/console cloud:migration-oci-postgres mon\_projet.  
Cette commande construit un dump pour postgresql "../data/postgres/dump\_mon\_projet.sql"
- Récupérer le dump postgres généré dans le répertoire "../data/postgres/dump\_mon\_projet.sql"
- Importer le dump postgres généré dans la base de donnée "mabase" : psql -h localhost -d mabase -U postgres -p 5432 -b -q -f mon\_dump\_postgres.sql (mot de passe = postgres)

## Migrations vers le Cloud
